In radio engineering, an antenna is the interface between radio waves propagating through space and electric currents moving in metal conductors, used with a transmitter or receiver. In transmission, a radio transmitter supplies an electric current to the antenna's terminals, and the antenna radiates the energy from the current as electromagnetic waves (radio waves).

In radio and telecommunications a dipole antenna or doublet is the simplest and most widely used class of antenna. The dipole is any one of a class of antennas producing a radiation pattern approximating that of an elementary electric dipole with a radiating structure supporting a line current so energized that the current has only one node at each end. A dipole antenna commonly consists of two identical conductive elements such as metal wires or rods.

Una antenna, nelle telecomunicazioni, è un dispositivo elettrico atto a trasmettere e/o ricevere onde elettromagnetiche: le antenne forniscono al ricevitore un segnale elettrico proporzionale al campo elettromagnetico in cui sono immerse, oppure viceversa irradiano, sotto forma di campo elettromagnetico, il segnale elettrico fornito loro da un trasmettitore.
