An artificial neural network is a network of simple elements called artificial neurons, which receive input, change their internal state (activation) according to that input, and produce output depending on the input and activation.

## **Artificial neural network - Wikipedia**

In computer science, artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and other animals.

## **Artificial intelligence - Wikipedia**

An artificial neural network uses the human brain as inspiration for creating a complex machine learning system. There are now neural networks that can classify millions of sounds, videos, and images.

## **Artificial Intelligence: A Modern Approach**

The human brain is a recurrent neural network (RNN): a network of neurons with feedback connections. It can learn many behaviors / sequence processing tasks / algorithms / programs that are not learnable by traditional machine learning methods.

normalization may be the mark [65]. Nevertheless, the speculative explanation given in [33] has been repeated as fact, e.g. in [60], which states, "it is well-known that a deep neural network is very
