ABSTRACT. This work presents an experimental study of purification of a biogas by removal of its hydrogen sulphide (H_2S) content. The H_2S was removed by means of chemical absorption in an iron-chelated solution catalyzed by Fe/EDTA, which converts H_2S into elemental sulphur (S).

INTRODUCTION. New methods to generate energy have been investigated in the last decade due to concerns about the depletion of fuels. Hydrogen is a promising source of energy because this gas affords a clean and high heat of combustion.

For material flowing through a volume, the residence time is a measure of how much time the matter spends in it. Examples include fluids in a chemical reactor, specific elements in a geochemical reservoir, water in a catchment, bacteria in a culture vessel and drugs in human body.
